

I'm not robot!

A unidade remota SOLAR-02 foi projetada para medir a irradiação [W / m²] e a temperatura [° C] por meio de sondas apropriadas conectadas a ela. Também pode ser usado em combinação com um instrumento MASTER para realizar as medições acima mencionadas para testar / registrar a eficiência de instalações fotovoltaicas monofásicas e trifásicas. A unidade remota SOLAR-02 é um instrumento de medição capaz de usar radiofrequência para transferência de dados. Por razões internas, foi adotada uma banda de frequência harmonizada de 2,4 GHz. O referido dispositivo baseado em rádio é construído sob a Classe 1, de acordo com o Acordo estipulado entre os países da CEE e da EFTA, conforme definido pelos protocolos ERC / REC 70-03. Exibição em tempo real dos valores de irradiação e temperatura Configuração até 3 sondas de irradiação Use com piranômetros e células de referência Conexão com unidades mestras via conexão USB ou de radiofrequência RF Sincronização com a unidade mestre ao iniciar o teste / gravação. Medição do ângulo de inclinação dos painéis fotovoltaicos Magnetismo na parte de trás do medidor Explore a linha solar HT Instruments completa aqui. Product HighlightsReal-time display of irradiation and temperature valuesSetting up to 3 irradiation probesUse with pyranometers and reference cellsConnection to Master units via USB or radio frequency connection RFSyncronization with master unit when starting testing/recordingMeasurement of the tilting angle of PV panelsMagnetics on the back side of meterEach Unit IncludesISO9000 calibration certificateUser manualQuality EngagementEasy change and returnDelivery AvailableFavorable payment Overview Previous Next Accessories 2 Similar products Customers also bought Customers also viewed MESSAGE Voltage too low Vin > 1000 Irradiance too low NTC Error Please wait for cooling...
